                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                          cc array element in a microarray for monitoring the expression of a number cd diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in the cd diagnosis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, cforensics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The carray can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose coding for different signaling cancer e.g. adenocarcinoma and leukaemia, communopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease coding and parkinson's disease. The present sequence represents a polynucleotide probe of the invention.

CC Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequalta.uspto.gov/sequence.html?DocID=06500938B1.

(C) (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular CC acids. Also described: (I) an assay for the detection of a particular CC and (2) an isolated antibody having high specificity and high affinity CC or avidity for a particular GPCR. (I) can be used as GPCR modulators and CC in gene therapy. The antigenic peptides for GPCRs are useful in detecting CC antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the CC presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell cregeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's diseases, cute carterial, fungal, protozoan or viral infections,
                                                                                 osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; ostivitisments; description; anxiety; depression; schizophrenia; dementia; dement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease cancer or autoimmune diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human C-C chemokine receptor 3 nucleotide SEQ ID

                        A genomic DNA clone (T31334) codes for a novel receptor (W03376), designated Eos L2 or C-C chemokine receptor 3 (CKR-3), involved in leukocyte migration associated with inflammation. It was isolated from a human genomic library in EMBL3 SP7/T7 vector by screening with a PCR fragment generated from eosinophil cDNA using degenerate primers (see also T31337-44). A CKR-3 cDNA clone (T31335) was also isolated, and a consensus sequence is given in T31336. The genomic and cDNA clones can be used for the prodn. of recombinant CKR-3 in host cells, or to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gerard

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Degenerate primers based on the guinea pig eotaxin amino acid sequence were used for the reverse transcriptase polymerase chain reaction (RT-PCR) amplification of RNA isolated from inflamed, eosinophilic lung tissue obtained from Balb/c mice sensitised to ovalbumin. The amplification product was used as a probe to screen a human genomic library in vector EMBL3 SP6/T7 to obtain the hE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          eosinophils (including chemotaxis), binds.

hE can be used to develop products for the diagnosis, preventic treatment of hE associated diseases or conditions. The products be used to treat inflammatory or allergic diseases and conditions including respiratory allergic diseases (e.g. asthma, allergic diseases).
                                                                                                                                                                                         Human C-C

CC RANTES and MCP-3. The DNA was isolated from a human genomic phage CC library using as probe a PCR fragment that had been generated from CC chemokine receptor genes. A cDNA clone (see ANV07405-12) based on known CC chemokine receptor genes. A cDNA clone (see ANV07403) for CKR-3 is CC also provided. Comparison of the sequences suggests that the CC genomic DNA has an intron that separates the promoter and most CC of the 5' untranslated region from the coding region. A consensus CC of the 5' untranslated region from the coding region. A consensus CC of the French and cDNA sequences is provided (see ANV07404). The CC invention relates to isolated and/or recombinant nucleic acids constructs, host cells useful for production of recombinant CKR-3 proteins, to antibodies reactive CC dientify ligands, antagonists and agonists of receptory or allergic clientify ligands, antagonists and agonists of receptor function. CC Inhibitors of CKR-3 can be used to treat: inflammatory or allergic clientify ligands, antagonists and agonists of receptor function. CC indentify ligands, antagonists and agonists of receptor function. CC indentify ligands, antagonists and agonists of receptor function. CC indentify ligands, antagonists, including respiratory allergic diseases compared the products to associated with rheumatoid ecsinophilic pneumonia (e.g. C. Loeffler's syndrome, chronic cosinophilic pneumonia, interstitial CC ankylositis or dermatcomyositis), systemic supulporary fibrosis or ILD cassociated with rheumatoid arthritis, systemic supulporary syndrome, CC inflammatory bowel disease, such as Crohm's disease and ulcerative CC inflammatory bowel disease, such as Crohm's disease and ulcerative CC inflammatory bowel disease, such as Crohm's disease and ulcerative CC inflammatory bowel disease, such as crohm's disease such as rheumatoid carchitis, such as dermatitis, unclaitis escentisis, systemic lupus content carchitis, autoimmune diseases such as rheumatoid carchitis, autoimmune diseases such as rheumatoid carchitis, autoimmune
                                                                                                                                                     erythematosus, myasthenia gravis, juvenile onset diabetes, glomerulonephritis, autoimmune thyroiditis and Behcet's disease; graft rejection, including allograft rejection or graft-versus-host disease; cancers with leukocyte infiltration of the skin or organs; and also reperfusion injury, atherosclerosis, certain haematologic malignancies, septic shock and endotoxic shock. Promoters of CKR-3 function can be used for treating: immunosuppression e.g. in AIDS patients or individuals undergoing radiation therapy, chemotherapy, therapy for autoimmune disease or other drug therapy, and immunosuppression due congenital deficiency in receptor function or other causes; and infectious diseases such as parasitic diseases, including helminth infections, such as nematodes (round worms).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibodies to chemokine receptor-3 protein - useful for diagnosis and treatment of inflammatory conditions, e.g. allergy, asthma,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                 The present invention describes low adenosine (A) content antisense CC oligonuclectides and compositions (I) comprising them. In the antisense CC oligonuclectides the A is replaced by a 'Universal' or alternative base. CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. CC The antisense oligonuclectides and (I) can be used to down-regulate the CC carpession and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasoactive peptides and contral receptors, defensins, growth factors, vasoactive peptides and contral receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.
                           The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2000-205971/18

The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the crelease of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present curvention, which correspond to SEQ ID NO:1 to 2815, and then the last differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The method involves: (a) detecting or measuring the formation of a complex between the MEC, and the CCR3 or CCR10; or (b) determining the ability of the cest agent to inhibit or augment a MEC-induced response. An augmentation confict of complex formation, relative to a control, is indicative that the agent conhibitors or promoter) of MEC-induced functions of CCR3 and/or CCR10. The inhibitors are useful for treating inflammatory diseases or conditions in a subject, e.g. oral inflammatory condition (e.g. Sjogren's syndrome or Behcet's syndrome), mastitis, chronic obstructive lung disease, asthma, inflammatory bowel disease (e.g. Crohn's disease, culcerative colitis or celiac disease), IgA nephropathy or dermatitis or cutaneous T cell lymphoma), neoplastic disease, retinopathy, macular degeneration, bacterial infections, tuberculoid leprosy, viral confections, and confidents in processing contains. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

The invention relates to identifying an agent which inhibits or promotes the binding of mammalian MEC (mucosae-associated epithelial chemokine) to CC a mammalian C-C chemokine receptor 3 (CCR3) or CCR10 comprising a CC (a) combining an agent to be tested, a composition comprising a CC naturally occurring mammalian (CCR3). CCR10 or MEC-binding variant, and a CC mammalian MEC; and (b) detecting or measuring the formation of a complex between the MEC and the CCR3, CCR10 or MEC-binding variant. The CC method alternatively comprises: (a) combining an agent to be tested, a CC cell expressing a protein comprising a maturally occurring mammalian (CCR3, CCR10 or MEC-binding variant, and a mammalian MEC under conditions (CCR3, CCR10 or MEC-binding variant, and a mammalian MEC under conditions (CCR3, CCR10 or MEC-binding variant, and a mammalian MEC under conditions (CCR3, CCR10 or MEC-binding the agent indicates that the agent is an inhibitor or promoter. Also included are: (1) an immunoglobulin or antigen-binding fragment which binds a naturally occurring mammalian CCR3 or CCR10, and inhibits the binding of a contitity of an IgA antibody-secreting cell in a subject, comprising (CCMEC occurring mammalian MEC to the receptor; and (2) modulating the CCR3 and/or CCR10. The methods and compositions of the present condition such as oral inflammatory condition (e.g., Sjogren's or CCR Behcet's syndrome), mastitis, chronic obstructive lung disease or altergic condition such as oral inflammatory condition (e.g., Sjogren's or CCR Behcet's syndrome), mastitis, chronic obstructive lung disease, asthma, CC uncerative colitis and coeliac disease. They can also be used in CC autoimmune diseases such as arthritis, multiple sclerosis, cancers, infectious (diseases and disorders are CC diseases and disorders are CCR3. The present sequence is the Human cDNA encoding C-C chemokine CCR3. The present sequence is the Human cDNA encoding C-C chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying agents that inhibit or promote binding of mammalian MEC CCR3 or CCR10, useful for treating an inflammatory and autoimmune diseases, atherosclerosis, cancers, infectious diseases, diabetes, arthritis and asthma -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Fig 4; 46pp; English

The present invention describes a method (M1) for screening for an CC anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic expression is indicative of anti-neoplastic activity. (I) has cytostatic cativity and can be used in gene therapy. M1 can be used for screening anti-neoplastic agent, and can be used for product which compared to the data collected with respect to the anti-neoplastic agent as a coll structure and/or properties of the agent. M1 can be used in the creatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinema, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, squamous cell carcinoma, neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                 18-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
The invention relates to genetic variants of human chemokine (C-C motif) receptor 3 (CCR3) gene. The invention also relates to compositions and methods for haplotyping and/or genotyping the CCR3 gene in an individual Polynucleotides of the invention are useful for studying the expression
                                                                                                          WPI; 20

They are also used in gene therapy. The polymorphism and haplotype data is useful for validating whether CCR3 is a suitable target for drugs to treat type IV hypersensitivity reactions and human immunodeficiency virus (HIV)-1, screening for such drugs and reducing bias cells in clinical trials of such drugs. The genotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for improving the efficiency and outcome of several steps in the discovery and development of drugs for treating diseases associated with CCR3 activity such as type IV hypersensitivity reactions and HIV-1. The present sequence is human CCR3 gene located on chromosome 3p21.3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to genetic variants of human chemokine (C-C motif) creceptor 3 (CCR3) gene. The invention also relates to compositions and methods for haplotyping and/or genotyping the CCR3 gene in an individual. Polymucleotides of the invention are useful for studying the expression cc and function of CCR3 and in expressing CCR3 proteins for use in screening cc used in gene therapy. The polymorphism and haplotype data is useful for validating whether CCR3 is a suitable target for drugs to treat type IV hypersensitivity reactions and human immunodeficiency virus (HIV)-1, screening for such drugs and reducing bias cells in clinical trials of such drugs. The genotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for determining whether an an individual has one haplotype or haplotype pairs. The haplotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for improving the efficiency and outcome of several steps in the discovery and development of drugs for treating diseases associated with CCR3 activity such as type IV hypersensitivity reactions and HIV-1.

The present sequence is human CCR3 gene located on chromosome 3p21.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The 88-2B cDNA was obtained from a macrophage cDNA library using 88-2B-specific primers. A full-length clone (see AAT89161) for chemokine receptor 88C (AAW27123) was also obtained. 88C and 88-2B cDNAs can be used to produce recombinant polypeptides in transformed host cells for use in the treatment of e.g. atheroslerosis, rheumatoid arthritis, tumours, asthma, viral infection, AIDS and inflammatory conditions. Nucleic acid fragments can be used to isolate genomic sequences, to detect alleles of the gene (for diagnosis or in gene therapy), to alter receptor genetics to facilitate identification of modulators and to produce knockout animals, and (antisense forms) to alter/study the
                                                                                                                          New ovary polypeptides useful for detecting, diagnosing, monitoring, treating, staging and imaging cancers in humans having cancer and non-cancerous ovary disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim
                                        The present invention provides human proteins and coding sequences specifically found in ovary cells. These can be used in the diagnosis treatment of ovarian diseases, including cancer. The present sequence

밁
     cc oligonucleotides and compositions (I) comprising them. In the antisense (C) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the cexpression and or activity of target polypeptides associated with cativating peptide factors and malignancies, such as stimulating and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokines and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system creceptors, defensins, growth factors, vasoactive peptides and considered specific antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or bronchoconstriction which are associated with a disease or condition aslacred from pulmonary vasoconstriction inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; adenosine receptor; low adenosine antisense oligonucleotide; phosphorothicate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                     New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                            SdC

This 5099 base pair sequence comprises a 1065 base pair open reading frame encoding a 355 amino acid eosinophil eotaxin receptor protein, flanked by a 5' genomic DNA sequence and a 3' terminator region. This novel eosinophil eotaxin receptor is a human beta-chemokine receptor designated CC CKR3. Agents which bind to this eosinophil eotaxin receptor can be used for the treatment and prevention of atopic conditions such as allergic rhinitis, dermatitis, conjunctivitis and bronchial asthma. Agents which block this eosinophil eotaxin receptor can be used to prevent viral infection in healthy individuals and slow or halt viral progression in the forted participation.
The present sequence encodes human chemokine receptor CCR3. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CX3CR1 and that the
                                                                                                                                         Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or asthma, by modulating a binding interaction between a cell chemokine-receptor a surface protein of the virus -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; chemokine receptor; CCR3; viral infection; surface protein; respiratory virus infection; respiratory syncytial virus infection; RSV infection; bronchiolitis; bronchitis; pneumonia; asthma; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleotide sequence of human chemokine receptor CCR3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABZ68879;

                                                                                                                                       The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis, pneumonia or asthma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; gene expression; heart; microarray; vascular system; cardiovascular disease; hypertension; cardiac arrhythmia; congenital heart disease; ss.

                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                 epilepsy and invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAI44108 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 549

                                                  The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention.

Conte: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-FEB-2000; 2000US-0180312.

musculus C57BL/6J (female) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through &
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         dorsal root ganglia"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ligated to the blunt ends in high molar excess.
